Folks,

First a big thanks to all that attended—especially those that flew great distances! All of your contribution and inputs are greatly appreciated. I think we had a good meeting and there are many areas of opportunity to work together to better exploit our genebank collections to improve soybean breeding for the future. We identified some first steps where we can work together, but I think we will need to work hard to keep momentum going.

Please let me know if you have any comments or want to make any modifications to the attached report.

Sincerely, Scott Jackson
