Hi All,

Attached is the latest tracking of funding attempts (research and foundation applications). We have added two more GBIRD organizations to the effort – NWRC and Univ of Adelaide! Good luck to Toni, Paul and the teams that will be working on this!!!

Also, below is another opportunity for the organizational and focus area leads to consider. There is good alignment between this ICGEB grant and GBIRD program.

Again, please let me and/or listserv know if you are applying for a grant with GBIRD implications. Same goes with scientific presentations. This will allow coordinated approach and prevent multiple similar applications or abstracts submitted to the same funding org or meeting.

Warm Regards,  
Royden

## [International Center for Genetic Engineering and Biotechnology](#) [– Research Grants 2017](#)

The ICGEB Research Grants support projects in agricultural biotechnology, environmental bio-remediation, and many other fields. The grants are intended to facilitate the creation of research facilities in promising institutes; to promote training of young scientists; and to develop new research programs in participating countries. The program is open to applicants who have positions at universities and research institutes in ICGEB's member states. Grants are a maximum of €25 thousand per year for projects of up to three years. The deadline for submitting applications is 30 April of each year. [Link](#)
